

Overall Risk Level is:

Substantial

Recommended Learning Scenario is:

Virtual w/ onsite support

Benchmarks

Most Recent Data [1]

Cases Per 100k People	1884.79457857
Percent Positivity	21.35%
Covid-Like Illness	12.9%

Prior Weeks Data [2]

Cases Per 100k People	1397.71283355
Percent Positivity	11.19%
Covid-Like Illness	12.8%

End of Report

Dashboard Updates and Corresponding Data Time Periods

The MCDPH school dashboard will be updated every Thursday for the data covering the two-week period ending 12 days earlier. The table below provides dashboard updates with the corresponding data time period shown on the pop-up report for case rates and percent positivity. The COVID-like illness (CLI) percentage of hospital visits is calculated using countywide surveillance data and is not an area-specific metric. Dates for surveillance data can be found at phcovid.maricopa.gov.

Notes:

- If the area selected has a % positivity noted as "NA" in a gray box, this means there were <10 total tests done in that area during the specified week. In these cases, which might change from week to week, the % positivity metric will not be used in determining the overall community spread in that area (i.e., whether it appears as Red, Yellow, or Green).
- The metrics for areas that cross county lines only include case, test, and population data for Maricopa County residents. These data are representative of the case rate and % positivity for the portion of the area that is in Maricopa County and are not representative of the case rate and % positivity for the entire geographic area.
- To move from a virtual to an in-person learning scenario, it is recommended schools wait until there is <7% positivity in their area for two consecutive weeks of data. Once schools meet the recommended % positivity threshold to re-open, the recommended learning scenario will remain Hybrid as long as the % positivity stays under the Moderate spread threshold of 10%.
- Geographic regions with smaller populations will have case rates that vary more widely due to the small population denominator.
- Once schools meet benchmarks for re-opening, decision-makers should continue to monitor their area community spread data for any trends that may result in a change in their recommended learning scenario.
